ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT
ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

The OECD is a unique forum where the governments of 30 democracies work together to address the economic, social and environmental challenges of globalisation. The OECD is also at the forefront of efforts to understand and to help governments respond to new developments and concerns, such as corporate governance, the information economy and the challenges of an ageing population. The Organisation provides a setting where governments can compare policy experiences, seek answers to common problems, identify good practice and work to co-ordinate domestic and international policies.

The OECD member countries are: Australia, Austria, Belgium, Canada, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The Commission of the European Communities takes part in the work of the OECD.

OECD Publishing disseminates widely the results of the Organisation's statistics gathering and research on economic, social and environmental issues, as well as the conventions, guidelines and standards agreed by its members.

This work is published on the responsibility of the Secretary-General of the OECD. The opinions expressed and arguments employed herein do not necessarily reflect the official views of the Organisation or of the governments of its member countries.

Corrigenda to OECD publications may be found on line at: www.oecd.org/publishing/corrigenda.

ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES

L'OCDE est un forum unique en son genre où les gouvernements de 30 démocraties œuvrent ensemble pour relever les défis économiques, sociaux et environnementaux que pose la mondialisation. L'OCDE est aussi à l'avant-garde des efforts entrepris pour comprendre les évolutions du monde actuel et les préoccupations qu'elles font naître. Elle aide les gouvernements à faire face à des situations nouvelles en examinant des thèmes tels que le gouvernement d'entreprise, l'économie de l'information et les défis posés par le vieillissement de la population. L'Organisation offre aux gouvernements un cadre leur permettant de comparer leurs expériences en matière de politiques, de chercher des réponses à des problèmes communs, d'identifier les bonnes pratiques et de travailler à la coordination des politiques nationales et internationales.

Les pays membres de l'OCDE sont : l'Allemagne, l'Australie, l'Autriche, la Belgique, le Canada, la Corée, le Danemark, l'Espagne, les États-Unis, la Finlande, la France, la Grèce, la Hongrie, l'Irlande, l'Islande, l'Italie, le Japon, le Luxembourg, le Mexique, la Norvège, la Nouvelle-Zélande, les Pays-Bas, la Pologne, le Portugal, la République slovaque, la République tchèque, le Royaume-Uni, la Suède, la Suisse et la Turquie. La Commission des Communautés européennes participe aux travaux de l'OCDE.

Les Éditions OCDE assurent une large diffusion aux travaux de l'Organisation. Ces derniers comprennent les résultats de l'activité de collecte de statistiques, les travaux de recherche menés sur des questions économiques, sociales et environnementales, ainsi que les conventions, les principes directeurs et les modèles développés par les pays membres.

Cet ouvrage est publié sous la responsabilité du Secrétaire général de l'OCDE. Les opinions et les interprétations exprimées ne reflètent pas nécessairement les vues de l'OCDE ou des gouvernements de ses pays membres.

Les corrigenda des publications de l'OCDE sont disponibles sur : www.oecd.org/editions/corrigenda.

Foreword

In today's global economy, the prosperity of countries now derives to a large extent from their human capital, and to succeed in a rapidly changing world, individuals need to advance their knowledge and skills throughout their lives. Education systems need to lay strong foundations for this, by fostering learning and strengthening the capacity and motivation of young adults to continue learning beyond school. Parents, students, those who teach and who run education systems, and the general public alike therefore need good information on how well their schools prepare students for life. Many countries monitor students' learning in order to provide answers to this question. Comparative international assessments can extend and enrich the national picture by providing a larger context within which to interpret national performance.

In response to this need for cross-nationally comparable evidence on student performance, the Organisation for Economic Co-operation and Development (OECD) launched the OECD Programme for International Student Assessment (PISA™) in 1997. PISA represents a commitment by governments to monitor the outcomes of education systems in terms of student achievement on a regular basis and within an internationally agreed common framework. PISA has now become the most comprehensive and rigorous international programme to assess student performance and to collect data on the student, family and institutional factors that can help to explain differences in performance. The countries participating in PISA together make up close to 90% of the world economy.

PISA 2006: Science Competencies for Tomorrow's World presents first results from the most recent PISA survey, which focused on science and also assessed mathematics and reading. It is divided into two volumes. This volume presents the data underlying the analysis that is reported in Volume 1. Volume 1 gives the most comprehensive international picture of science learning today, exploring not only how well students perform, but also their interests in science and their awareness of the opportunities that science competencies bring as well as the environment that schools offer for science learning. Volume 1 places the performance of students, schools and countries in the context of their socio-economic background and identifies important educational policies and practices that are associated with educational success.

Both volumes, as well as the PISA database and sample test questions from the PISA surveys, are available on line at www.pisa.oecd.org.

The report is the product of a collaborative effort between the countries participating in PISA, the experts and institutions working within the framework of the PISA Consortium, and the OECD. A full list of those people who contributed to this publication is available in Volume 1 of this report. The report is published on the responsibility of the Secretary-General of the OECD.

Ryo Watanabe
Chair of the PISA Governing Board

Barbara Ischinger
Director for Education, OECD

Avant-propos

Au sein de l'économie mondialisée d'aujourd'hui, la prospérité des nations dépend dans une large mesure de leur capital humain et, pour réussir dans un monde qui évolue rapidement, les individus doivent continuer à étoffer leurs connaissances et compétences tout au long de la vie. Pour ce faire, les systèmes éducatifs ont la responsabilité de poser les bases de cet apprentissage, notamment en équipant les individus de connaissances indispensables et en renforçant la capacité et la volonté des jeunes adultes de continuer à apprendre au-delà de leur formation initiale. Toutes les parties prenantes – les élèves, les parents, les enseignants et les gestionnaires du système éducatif, ainsi que le grand public – doivent être tenues informées de l'efficacité avec laquelle l'école prépare les élèves à la vie d'adulte. De nombreux pays suivent l'évolution de l'apprentissage des élèves afin de mieux appréhender ces enjeux. Les analyses comparatives internationales peuvent étoffer et enrichir les états des lieux réalisés à l'échelon national en offrant un contexte plus large dans lequel interpréter les résultats nationaux.

L'Organisation de coopération et de développement économiques (OCDE) a lancé le Programme international pour le suivi des acquis des élèves (PISA™) en 1997 pour répondre au besoin de données sur la performance des élèves qui soient comparables au niveau international. L'enquête PISA est une nouvelle expression de la volonté des gouvernements des pays de l'OCDE d'étudier, de façon suivie et à l'intérieur d'un cadre conceptuel approuvé par tous, les résultats des systèmes éducatifs en termes d'acquis des élèves. Il s'agit aujourd'hui du programme international le plus complet et le plus rigoureux dans le domaine de l'évaluation des compétences des élèves et la collecte de données sur des facteurs relatifs aux élèves, aux familles et aux établissements en vue d'expliquer les différences de performance d'un pays à l'autre. Les pays prenant part à l'enquête PISA représentent près de 90 % de l'économie mondiale.

PISA 2006 : Les compétences en sciences, un atout pour réussir présente les premiers résultats du cycle d'enquête PISA le plus récent, dont le domaine d'évaluation majeur était la culture scientifique mais qui s'est également penché sur les mathématiques et la compréhension de l'écrit. Ce rapport est divisé en deux volumes, le second mettant en avant les données qui sous-tendent les analyses figurant dans le premier. Le Volume 1 fournit la vue d'ensemble internationale sur l'apprentissage des sciences la plus complète à l'heure actuelle, explorant non seulement les performances des élèves mais aussi leur intérêt envers les sciences, leur conscience des débouchés pour l'avenir que peuvent apporter de solides compétences en sciences, ainsi que le cadre proposé par les établissements pour l'enseignement des sciences. Il replace les performances des élèves, des établissements et des pays dans leur contexte socioéconomique et identifie les politiques et pratiques d'éducation importantes qui sont gage de succès éducatif.

Les deux volumes, ainsi que la base de données PISA et des exemples de questionnaires PISA, sont disponibles en ligne à l'adresse www.pisa.oecd.org.

Cet ouvrage est le fruit des efforts concertés des pays participant à l'enquête PISA, des experts et des institutions qui œuvrent au sein du consortium PISA et de l'OCDE. La liste complète des personnes ayant contribué à cette publication est disponible dans le Volume 1 du présent rapport. Le présent rapport est publié sous la responsabilité du Secrétaire général de l'OCDE.

Reader's Guide

Data underlying the figures

This volume presents the data referred to in Chapters 2 to 6 of Volume 1. The data are also available, with additional detail, on the PISA website (www.pisa.oecd.org). Five symbols are used to denote missing data:

- a The category does not apply in the country concerned. Data are therefore missing.
- c There are too few observations to provide reliable estimates (*i.e.* there are fewer than 30 students or less than 3 % of students for this cell or too few schools for valid inferences).
- m Data are not available. These data were collected but subsequently removed from the publication for technical reasons.
- w Data have been withdrawn at the request of the country concerned.
- x Data are included in another category or column of the table.

Calculation of international averages

An OECD average was calculated for most indicators presented in this report. In the case of some indicators, a total representing the OECD area as a whole was also calculated:

- The OECD average takes the OECD countries as a single entity, to which each country contributes with equal weight. For statistics such as percentages or mean scores, the OECD average corresponds to the arithmetic mean of the respective country statistics.
- The OECD total takes the OECD countries as a single entity, to which each country contributes in proportion to the number of 15-year-olds enrolled in its schools (see Annex A3 for data). It illustrates how a country compares with the OECD area as a whole.

In this publication, the OECD total is generally used when references are made to the overall situation in the OECD area. Where the focus is on comparing performance across education systems, the OECD average is used. In the case of some countries, data may not be available for specific indicators, or specific categories may not apply. Readers should, therefore, keep in mind that the terms OECD average and OECD total refer to the OECD countries included in the respective comparisons.

Rounding of figures

Because of rounding, some figures in tables may not exactly add up to the totals. Totals, differences and averages are always calculated on the basis of exact numbers and are rounded only after calculation.

All standard errors in this publication have been rounded to two decimal places. Where the value 0.00 is shown, this does not imply that the standard error is zero, but that it is smaller than 0.005.

Reporting of student data

The report uses "15-year-olds" as shorthand for the PISA target population. PISA covers students who are aged between 15 years 3 months and 16 years 2 months at the time of the assessment and who have completed at least 6 years of formal schooling, regardless of the type of institution in which they are enrolled and of whether they are in full-time or part-time education, of whether they attend academic or vocational programmes, and of whether they attend public or private schools or foreign schools within the country.

Reporting of school data

The principals of the schools in which students were assessed provided information on their schools' characteristics by completing a school questionnaire. Where responses from school principals are presented in this publication, they are weighted so that they are proportionate to the number of 15-year-olds enrolled in the school.

Abbreviations used in this report

The following abbreviations are used in this report:

GDP	Gross Domestic Product
ISCED	International Standard Classification of Education
PPP	Purchasing power parity
S.D.	Standard deviation
S.E.	Standard error

Further documentation

For further information on the PISA assessment instruments and the methods used in PISA, see the *PISA 2006 Technical Report* (OECD, forthcoming) and the PISA website (www.pisa.oecd.org).

This report uses the OECD's StatLinks service. Below each table and chart is a url leading to a corresponding Excel workbook containing the underlying data. These urls are stable and will remain unchanged over time. In addition, readers of the *PISA 2006: Science Competencies for Tomorrow's World* e-book will be able to click directly on these links and the workbook will open in a separate window.

Guide du lecteur

Données des figures

Ce volume présente les données auxquelles il est fait référence dans les Chapitres 2 à 6 du Volume 1. Des détails supplémentaires sont disponibles sur le site Web de l'enquête PISA (www.pisa.oecd.org). Les cinq symboles suivants indiquent que des données sont manquantes :

- a la catégorie ne s'applique pas au pays concerné, les données sont donc manquantes ;
- c les observations sont trop peu nombreuses pour calculer des estimations fiables (par exemple, les données portent sur moins de 30 élèves ou 3 % des élèves ou les établissements ne sont pas suffisamment nombreux pour faire des déductions valides) ;
- m les données ne sont pas disponibles. Elles ont été collectées mais ont ensuite été exclues de la publication par des raisons techniques ;
- w les données ont été exclues à la demande du pays concerné ;
- x les données sont incluses dans une autre catégorie ou dans une autre colonne du tableau.

Calcul des moyennes internationales

La moyenne de l'OCDE est calculée pour la plupart des indicateurs présentés dans ce rapport. La valeur totale, calculée à l'échelle de l'OCDE tous pays confondus, est également ajoutée dans certains indicateurs :

- la moyenne de l'OCDE est calculée selon l'hypothèse que les pays membres de l'OCDE constituent une seule entité à laquelle chaque pays contribue dans la même mesure. Dans les statistiques telles que les proportions et les valeurs moyennes, la moyenne de l'OCDE est la moyenne arithmétique des valeurs de tous les pays de l'OCDE ;
- le total de l'OCDE est calculé selon l'hypothèse que les pays de l'OCDE constituent une seule entité à laquelle chaque pays contribue dans une mesure proportionnelle au nombre d'élèves de 15 ans inscrits dans ses établissements d'enseignement (voir l'annexe A3 pour des données chiffrées). Le total de l'OCDE permet de comparer les pays par rapport à la situation générale dans tous les pays de l'OCDE.

Dans ce rapport, le total de l'OCDE est la valeur utilisée lorsqu'il est fait référence à la situation dans l'ensemble des pays de l'OCDE, alors que la moyenne de l'OCDE est la variable employée lorsqu'il s'agit de comparer les performances des systèmes d'éducation entre eux. Par ailleurs, il arrive que les données de certains pays ne soient pas disponibles pour des indicateurs spécifiques ou que des catégories particulières de données ne soient pas applicables. Le lecteur doit garder présent à l'esprit le fait que les termes « moyenne de l'OCDE » et « total de l'OCDE » font référence aux pays inclus dans les comparaisons.

Arrondis

Dans certains tableaux, il arrive que la somme des chiffres ne corresponde pas exactement au total mentionné en raison des ajustements d'arrondi. Les totaux, les différences et les moyennes sont systématiquement calculés à partir des chiffres exacts. Ils ne sont arrondis qu'une fois calculés.

Toutes les erreurs types présentées dans ce rapport sont arrondies à la deuxième décimale. Si « 0.00 » est indiqué, cela ne signifie pas que l'erreur type est nulle, mais qu'elle est inférieure à 0.005.

Présentation des données relatives aux élèves

Le rapport désigne la population cible de l'enquête PISA par l'expression générique « les jeunes de 15 ans ». En pratique, il fait référence aux élèves qui avaient entre 15 ans et 3 mois accomplis et 16 ans et 2 mois accomplis au moment de l'évaluation et qui avaient suivi au moins 6 années d'enseignement formel, quels que soient le mode de scolarisation (à temps plein ou à temps partiel), la filière d'enseignement (générale ou professionnelle), ou le type d'établissement (établissement privé, public, ou étranger situé au sein du pays).

Présentation des données relatives aux établissements

Les chefs d'établissement des élèves soumis à l'évaluation ont été priés de remplir un questionnaire portant sur les caractéristiques de leur établissement. Les réponses des chefs d'établissement présentées dans ce rapport sont pondérées en fonction des effectifs d'élèves de 15 ans inscrits dans leur établissement.

Abréviations

Les abréviations suivantes sont employées dans ce rapport :

GDP	Produit intérieur brut (PIB)
ISCED	Classification internationale type de l'éducation (CITE)
PPP	Parités de pouvoir d'achat (PPA)
S.D.	Écart type (Éc. T.)
S.E.	Erreur type (Er. T.)

Autres références

Pour plus d'informations sur les instruments d'évaluation et la méthodologie de l'enquête PISA, il y a lieu de consulter le rapport technique sur le cycle PISA 2006 (*PISA 2006 Technical Report*, OCDE, à paraître) et le site Web de l'enquête PISA (www.pisa.oecd.org).

Ce rapport applique le système « StatLinks » de l'OCDE : tous les tableaux et figures sont accompagnés d'un lien hypertexte (URL) qui donne accès à un classeur au format Excel contenant les données de référence. Ces liens sont stables et ne seront pas modifiés à l'avenir. De plus, il suffit aux lecteurs de la version électronique de *PISA 2006 : Les compétences en sciences, un atout pour réussir* de cliquer sur ces liens pour ouvrir les classeurs correspondants dans une autre fenêtre.

[Part 1/2]

Table 2.2b Percentage of students at each proficiency level on the *identifying scientific issues* scale, by gender

Tableau 2.2b Pourcentage d'élèves à chaque niveau de compétence sur l'échelle d'identification des questions d'ordre scientifique, selon le sexe

		Males – Proficiency levels													
		Below Level 1 (below 334.94 score points)		Level 1 (from 334.94 to 409.54 score points)		Level 2 (from 409.54 to 484.14 score points)		Level 3 (from 484.14 to 558.73 score points)		Level 4 (from 558.73 to 633.33 score points)		Level 5 (from 633.33 to 707.93 score points)		Level 6 (above 707.93 score points)

[Part 1/2]

Effect sizes for the difference between the top and bottom quarters of the PISA index of economic, social and cultural status (ESCS) for science attitudinal indices¹

Tableau 3.22 Différences entre les quartiles supérieur et inférieur de l'indice PISA de statut économique, social et culturel (SESC) en termes d'ampleur de l'effet dans les indices d'attitude en sciences

Effect sizes in favour of students from more advantaged background:

- from 0.2 to 0.5
- from 0.5 to 0.8
- Equal or greater than 0.8

Effect sizes in favour of students from less advantaged background:

- from -0.2 to -0.5
- from -0.5 to -0.8
- Equal or less than -0.8

	General value of science		Personal value of science		Self-efficacy in science		Self-concept in science		General interest in science		Enjoyment of science		Instrumental motivation to learn science

[Part 2/2]

Effect sizes for the difference between the top and bottom quarters of the PISA index of economic, social and cultural status (ESCS) for science attitudinal indices¹

Table 3.22 Différences entre les quartiles supérieur et inférieur de l'indice PISA de statut économique, social et culturel (SESC) en termes d'ampleur de l'effet dans les indices d'attitude en sciences

Effect sizes in favour of students from more advantaged background:

from 0.2 to 0.5
from 0.5 to 0.8
Equal or greater than 0.8

Effect sizes in favour of students from less advantaged background:

from -0.2 to -0.5
from -0.5 to -0.8
Equal or less than -0.8

	Future-oriented motivation to learn science		Science-related activities		Awareness of environmental issues		Level of concern for environmental issues		Optimism regarding environmental issues		Responsibility for sustainable development

Table 3.23 Effect sizes for the difference between students with an immigrant background and native students for science attitudinal indices¹

Tableau 3.23 Différences en termes d'ampleur de l'effet dans les indices d'attitude en sciences entre les élèves allochtones et autochtones

Effect sizes in favour of native students:

from -0.2 to -0.5
from -0.5 to -0.8
Equal or less than -0.8

Effect sizes in favour of students with an immigrant background:

from 0.2 to 0.5
from 0.5 to 0.8
Equal or greater than 0.8

	General interest in science		Enjoyment of science		Instrumental motivation to learn science		Future-oriented motivation to learn science		Science-related activities		Self-concept in science		Self-efficacy in science

1. The variance components were estimated for all students in participating countries with data on socio-economic background and study programmes.

2. The total variance in student performance is calculated from the square of the standard deviation for the students used in the analysis. The statistical variance in student performance and not the standard deviation is used for this comparison to allow for the decomposition.

3. The sum of the between- and within-school variance components, as an estimate from a sample, does not necessarily add up to the total.

4. In some countries, sub-units within schools were sampled instead of schools and this may affect the estimation of the between-school variance components (see Annex A2).

5. This index is often referred to as the intra-class correlation (ρ).

1. The variance components were estimated for all students in participating countries with data on socio-economic background and study programmes. Students in special education programmes were excluded from these analyses.

2. The total variance in student performance is calculated from the square of the standard deviation for the students used in the analysis. The statistical variance in student performance and not the standard deviation is used for this comparison to allow for the decomposition.

3. The sum of the between- and within-school variance components, as an estimate from a sample, does not necessarily add up to the total.

4. In some countries, sub-units within schools were sampled instead of schools and this may affect the estimation of the between-school variance components (see Annex A2).

5. This index is often referred to as the intra-class correlation (ρ).

1. The variance components were estimated for all students in participating countries with data on socio-economic background and study programmes. Students in special education programmes were excluded from these analyses.

2. The total variance in student performance is calculated from the square of the standard deviation for the students used in the analysis. The statistical variance in student performance and not the standard deviation is used for this comparison to allow for the decomposition.

3. The sum of the between- and within-school variance components, as an estimate from a sample, does not necessarily add up to the total.

4. In some countries, sub-units within schools were sampled instead of schools and this may affect the estimation of the between-school variance components (see Annex A2).

5. This index is often referred to as the intra-class correlation (rho).

1. The variance components were estimated for all students in participating countries with data on socio-economic background and study programmes.

2. The total variance in student performance is calculated from the square of the standard deviation for the students used in the analysis. The statistical variance in student performance and not the standard deviation is used for this comparison to allow for the decomposition.

3. The sum of the between- and within-school variance components, as an estimate from a sample, does not necessarily add up to the total.

4. In some countries, sub-units within schools were sampled instead of schools and this may affect the estimation of the between-school variance components (see Annex A2).

5. This index is often referred to as the intra-class correlation (rho).

[Part 1/2]

Table 4.4a Relationship between student performance in science and the PISA index of economic, social and cultural status (ESCS)

Tableau 4.4a Relation entre la performance des élèves en sciences et l'indice PISA de statut économique, social et culturel (SESC)

	Unadjusted mean score		Mean score if the mean ESCS would be equal in all OECD countries		Strength of the relationship between student performance and the ESCS		Slope of the socio-economic gradient ¹		Length of the projection of the gradient line					
									5 th percentile of the ESCS		95 th percentile of the ESCS		Difference between 95 th and 5 th percentile of the ESCS	
	Mean score	S.E.	Mean score	S.E.	Percentage of explained variance in student performance	S.E.	Score point difference associated with one unit on the ESCS	S.E.	Index	S.E.	Index	S.E.	Dif.	S.E.

2. This column indicates the extent to which standards-based external examinations exist in the system. Where there is a value between 0 and 1, standards-based external examinations exist in some parts of the system concerned, but not throughout the system (e.g. regional variation or variation between different types of education programmes).

Note: Values that are statistically significant are indicated in bold (see Annex A3).

1. Results based on reports from school principals and reported proportionate to the number of 15-year-olds enrolled in the school.

2. Schools which are directly controlled or managed by: i) a public education authority or agency, or ii) a government agency directly or a governing body, most of whose members are either appointed by a public authority or elected by public franchise.

3. Schools which receive 50% or more of their core funding - funding that supports the basic educational services of the institution - from government agencies.

Note: Values that are statistically significant at the 5% level (p<0.05) are indicated in bold.

1. Results based on reports from school principals and reported proportionate to the number of 15-year-olds enrolled in the school.

2. The cross-country correlation is based on all participating countries where the data are available.

Note: Values that are statistically significant at the 5% level ($p < 0.05$) are indicated in bold.

1. Results based on reports from school principals and reported proportionate to the number of 15-year-olds enrolled in the school.

2. The cross-country correlation is based on all participating countries where the data are available.

[Part 1/1]

Table 5.13 School principals' perceptions of vacant science teaching positions and lack of qualified science teachers¹

Tableau 5.13 Postes vacants d'enseignants et offre correspondante d'enseignants qualifiés dans les matières scientifiques

		Percentage of student in schools where the principal reported									
		No vacant science teaching positions to be filled		All vacant science teaching positions filled		One or more vacant science teaching positions not filled		No vacant science teaching positions to be filled or all vacant science teaching positions filled		One or more vacant science teaching positions not filled	
								of which a lack of qualified science teachers hinders instruction to some extent or a lot		of which a lack of qualified science teachers hinders instruction to some extent or a lot

		Variable name	Change in relationship	S.E.	P-value
Estimates of within-school effect of the PISA index of economic, social and cultural status on performance (ESCS slope)					
Intercept		ESCS	16.3	(1.2)	(0.000)
School with ability grouping for all subjects within school	1 = yes; 0 = no	ESCS*XABGR	0.6	(0.6)	(0.311)
School with high academic selectivity of school admittance	1 = yes; 0 = no	ESCS*XHISELE	-1.2	(0.8)	(0.139)
School with low academic selectivity of school admittance	1 = yes; 0 = no	ESCS*XLOSELE	1.1	(0.6)	(0.084)
System with early selection (difference between the first age of selection and the age of 15)	1 additional year	ESCS*YYRSSEP	-1.3	(0.7)	(0.056)
System-level number of school types or distinct educational programmes available to 15-year-olds	1 additional programme	ESCS*YNRTRACK	-1.3	(1.2)	(0.294)

Estimates of compositional effect of the school average PISA index of economic, social and cultural status on performance (XESCS slope)					
Intercept		XESCS	56.7	(3.3)	(0.000)
System with early selection (difference between the first age of selection and the age of 15)	1 additional year	XESCS*YYRSSEP	6.6	(2.4)	(0.009)
System-level number of school types or distinct educational programmes available to 15-year-olds	1 additional programme	XESCS*YNRTRACK	6.2	(3.1)	(0.049)

		Variable name	Change in score	S.E.	P-value
Estimates of the performance level in science (Intercept)					
Intercept			462.3	(6.0)	(0.000)
School with ability grouping for all subjects within school	1 = yes; 0 = no	XABGR	-3.5	(1.2)	(0.005)
School with high academic selectivity of school admittance	1 = yes; 0 = no	XHISELE	16.2	(2.5)	(0.000)
School with low academic selectivity of school admittance	1 = yes; 0 = no	XLOSELE	-1.3	(1.3)	(0.320)
System with early selection (difference between the first age of selection and the age of 15)	1 additional year	YYRSSEP	-1.9	(3.6)	(0.608)
System-level number of school types or distinct educational programmes available to 15-year-olds	1 additional programme	YNRTRACK	2.3	(6.2)	(0.709)

Background variables

Student's PISA index of economic, social and cultural status squared		ESCS ²	0.1	(0.3)	(0.584)
Student is female	1 = yes; 0 = no	FEMALE	-6.0	(1.1)	(0.000)
Student has no immigration background (student and parents were born in the country of assessment)	1 = yes; 0 = no	NATIVE	10.2	(3.1)	(0.002)
Student speaks the test language or other national language most of the time or always at home	1 = yes; 0 = no	SAMELANG	23.0	(2.8)	(0.000)
School located in a small town or village (fewer than 15 000 people)	1 = yes; 0 = no	XRURAL	4.7	(1.4)	(0.001)
School located in a city (with over 100 000 people)	1 = yes; 0 = no	XCITY	-5.3	(1.3)	(0.000)
School size	100 additional students	XSCHSIZE	1.5	(0.3)	(0.000)
School size squared		XSCHSIZE ²	0.0	(0.0)	(0.001)
System average PISA index of economic, social and cultural status	1 = OECD S.D.	YESCS	-2.3	(10.1)	(0.821)

Note: All slopes are fixed except ESCS and XESCS. All variables are grand-centred (a linear transformation of variables by subtracting the overall mean from the value proper). Intercept is random at all levels. The analysis is based on 55 countries. See Annex A8 for the detailed model specification.

II. Results for regions within countries/ *Résultats des régions au sein des pays*

DEFINITION

Adjudicated regions

Data for which adherence to the PISA sampling standards and international comparability was internationally adjudicated.

Non-adjudicated regions

Data for which adherence to the PISA sampling standards at sub-national levels was assessed by the countries concerned.

In these countries, adherence to the PISA sampling standards and international comparability was internationally adjudicated only for the combined set of all sub-national entities.

DÉFINITIONS

Régions adjudgées

Les normes d'échantillonnage et de comparabilité internationale PISA ont été respectées, les données de ces régions ont été adjudgées au niveau international.

Régions non adjudgées

Les normes d'échantillonnage PISA au niveau régional ont été évaluées par les pays concernés.

Dans ces pays, le respect des normes d'échantillonnage et de comparabilité internationale PISA a été évalué et adjudgé au niveau international uniquement pour les données de l'ensemble des régions du pays concerné.

[Part 1/1]

United Kingdom (England)	11 261	125.0	26.6	98.6	9.9	5.6
United Kingdom (Northern Ireland)	12 474	138.5	68.7	73.1	11.9	2.2
United Kingdom (Wales)	10 306	114.4	15.6	99.2	6.3	10.1

Note: See Table 4.1a for national data.

1. The variance components were estimated for all students in participating countries with data on socio-economic background and study programmes. Students in special education programmes were excluded from these analyses.

2. The total variance in student performance is obtained as the square of the standard deviation shown in Chapter 2. The statistical variance in student performance and not the standard deviation is used for this comparison to allow for the decomposition.

3. The sum of the between- and within-school variance components, as an estimate from a sample, does not necessarily add up to the total.

4. In some countries, sub-units within schools were sampled instead of schools and this may effect the estimation of the between-school variance components (see Annex A2).

Notes: Values that are statistically significant are indicated in bold (see Annex A3). See Table 4.4a for national data.

1. Single-level bivariate regression of science performance on the ESCS, the slope is the regression coefficient for the ESCS.

2. Student-level regression of science performance on the ESCS and the squared term of the ESCS, the index of curvilinearity is the regression coefficient for the squared term.

PISA 2006

VOLUME 2: DATA

Are students well prepared to meet the challenges of the future? Are they able to analyse, reason and communicate effectively? Have they found the kinds of interests they can pursue throughout their lives as productive members of the economy and society? The OECD Programme for International Student Assessment (PISA) seeks to provide some answers to these questions through its surveys of key competencies of 15-year-old students. PISA surveys are administered every three years in the OECD member countries and partner countries and economies, which together make up close to 90% of the world economy.

PISA 2006: Science Competencies for Tomorrow's World presents the results from the most recent PISA survey, which focused on science and also assessed mathematics and reading. It is divided into two volumes.

Volume 2: Data presents the PISA 2006 full dataset underlying *Volume 1: Analysis*. Volume 1 examines the performance of students, schools and countries in the context of socio-economic background and identifies important educational policies and practices that are associated with educational success.

Together with the PISA 2000 and PISA 2003 surveys, PISA 2006 completes the first cycle of assessment in the three key subject areas. PISA is now conducting a second cycle of surveys, beginning in 2009 with reading as the major subject and continuing in 2012 (mathematics) and 2015 (science).

PISA 2006

VOLUME 2 : DONNÉES

Les élèves sont-ils bien préparés aux défis de l'avenir ? Sont-ils véritablement capables d'analyser, de raisonner et de communiquer efficacement ? Ont-ils identifié le type d'intérêts qu'ils poursuivront au cours de leur vie en tant que membres productifs de l'économie et de la société ? Le Programme international de l'OCDE pour le suivi des acquis des élèves (PISA) tente d'apporter des réponses à ces questions en enquêtant sur les compétences des élèves de 15 ans dans des matières clés. Les enquêtes PISA sont administrées tous les trois ans, à la fois dans les pays membres de l'OCDE et dans des pays et économies partenaires qui, à eux tous, représentent près de 90 % de l'économie mondiale.

PISA 2006 : Les compétences en sciences, un atout pour réussir présente, en deux volumes, les premiers résultats du cycle d'enquête PISA le plus récent, dont le domaine d'évaluation majeur était la culture scientifique mais qui s'est également penché sur la culture mathématique et la compréhension de l'écrit.

Volume 2 : Données expose l'ensemble des données du cycle PISA 2006. Il s'agit du complément indispensable du Volume 1 : Analyse des résultats qui examine les performances des élèves, des établissements et des pays dans le contexte du milieu socioéconomique et identifie les politiques et pratiques d'éducation de premier plan qui sont gage de succès éducatif.

Avec les enquêtes PISA 2000 et PISA 2003, PISA 2006 vient compléter le premier cycle d'évaluation dans les trois domaines majeurs. Le programme PISA lance actuellement son second cycle d'enquête, qui débutera en 2009 avec la compréhension de l'écrit pour domaine principal et se poursuivra en 2012 avec les mathématiques et en 2015 avec les sciences.
